

RETAIL STORE INVENTORIES TO UPDATE STOCK ON HAND QUANTITIES

Case Study: Retail Inventory – Fashion Retailer

A fashion retailer needed RGIS to complete **inventories of selected retail stores** throughout Queensland and New South Wales in Australia within a short time frame

RETAIL STORE INVENTORIES TO UPDATE STOCK ON HAND QUANTITIES

Case Study: Retail Inventory – Fashion Retailer

An Australian retail company, known for its fashion clothing and stationery brands, required the support of RGIS. It has over 1,500 stores in 22 countries employing 20,000 people across eight brands. Stores range from 5,000 – 50,000 units in size.

REQUIREMENT

The fashion retailer completed in-house stocktakes, but were having difficulty completing all stores within the required time-frame, so came to RGIS for assistance. The retailer needed RGIS to complete **inventories of selected retail stores** throughout Queensland and New South Wales in Australia, and provide the following:

- All **60 retail store stocktakes** to be completed within a short time frame
- Provide **variance reports** for checking after initial counts
- Provide **accurate data** to update stock on hand quantities

SOLUTION

The fashion retailer partnered with RGIS to complete the **retail store inventory project**, and RGIS provided the following:

- RGIS obtained the list of stores which the retailer needed assistance with, and District Managers provided **suitable dates** to which the customer agreed
- A **full product master file** was obtained from the customer which had all current stock lines
- A **stock on hand file** for each store was also provided in order to create variance reports for the customer
- Scheduled teams of District Managers, Supervisors and a total **477 experienced RGIS auditors** to count all 60 retail stores

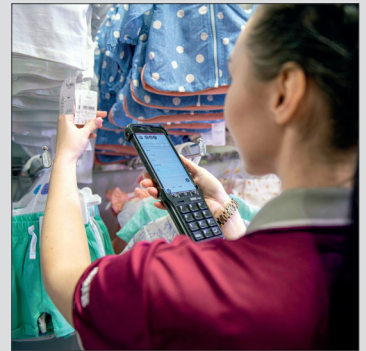

RESULTS

The fashion retailer found by outsourcing the **retail store inventory project** to RGIS, the following results were achieved:

- Accurately counted **890,000 units** across all 60 stores
- Once RGIS had completed the initial count, a **variance report was generated** by RGIS indicating any differences between the expected stock on hand to that just counted by RGIS auditors
- Results and reports were supplied back to the customer so that they could update the POS with **current and accurate stock on hand quantities**
- The retailer was able to **achieve their goal** of completing all stocktakes before the end of June deadline
- The customer was **very happy with the outcome**, and know that they can count on RGIS to assist with any stocktaking services in the future

The fashion retailer found by partnering with RGIS that they were able to **achieve their goal of completing all inventories** before the deadline, with **accurate and up-to-date data** for the systems
